

Stop Scheduling. Start Optimizing.

Introducing ALICE - the world's first AI construction simulation and optimization platform.

ALICE leverages the computational power of AI to generate the best schedules and solutions for your projects, no matter how large or complex. All that... in minutes.

How Does ALICE Work?

☑ Plan

Set up your Plan (rule set) in ALICE to define your labor and equipment availability, production rates, crane locations, and calendars. This rule set is parametric which means you change it on the fly and reschedule instantly.

⚙ Analyze

For each solution, ALICE generates fully resource-loaded 4D schedules in seconds, as well as project cost and resource utilization projections. Export your schedule to P6 with the click of a button.

💡 Simulate

Based on your Plan, ALICE simulates your projects millions of times, automatically looking through solutions that satisfy your rule set and improve project metrics such as cost and duration.

👤 Manage

Update progress and unleash the power of ALICE to resequence around any delays and get back on track in minutes. Visualize progress, catch delays and immediately explore alternative solutions to minimize impact on your project.

What Returns Can You Expect With ALICE?

17%

Reduction in project duration

14%

Labor cost savings

12%

Equipment cost savings

Cheaper cost per critical decision

2 Weeks to reschedule with P6
2 Minutes to reschedule with ALICE
